

# Turkey Reheat

- Pre-heat oven to 250 degrees
- Lift corner of tin foil and add 1 quart of liquid (examples: water, apple cider & water, or apple cider & white wine). Note: it's safe for the plastic wrap to go in the oven as long as it does not hang down the side of the pan and is covered by the foil.
- Refold corner of tin foil to seal turkey
- Place wrapped turkey in 250 degree oven for 2-2.5 hours
- Remove foil and plastic
- Turn oven up to 350, baste with butter for remaining 30 minutes
